Comments:

Leave the coal in the ground. It doesn't help us as much as moving to clean energy would and actively hurts us by creating greenhouse gases that heat our planet, not to mention the local air pollution. Let us invest in clean energy resources such as solar and wind. We do a disservice to our land and to all of us peoples when we extract and burn fossil fuels knowing the harm they cause. The time is now to preserve our forests and leave fossil fuels buried!
