Comments:

Dear NFS,

I respectfully request that we, the people who own and entrust the national forest for all, continue to ensure that ORV, especially off-road motorcycle, use be maintained and supported in our lands. There are majority of miles of single track trail which would closed under the proposals. The proposed areas of highly limited acreage to ORV only would further limit my recreational and hunting/fishing opportunities in the national forest.

I am a responsible ORV (off road motorcycle) user who has for his entire life used this land respectfully and fully. To cut the motorized use takes from me a highly valued use of the forest. With proper funding, education and management we can make this forest work for all - from logging to hunting to hiking to ORV. There are voices in society who would like to severely limit all human access to forest lands and those on this extreme present arguments which do not consider or represent the majority population who wish to simply enjoy the outdoors and forests in their own way. There is room for mixed use and dedicated trail use both.

Please do not let the politics extreme rule over the lands entrusted to be managed for all.

Thank you and respectfully,

Colin Stefanj
