Spring 2017 material Plan Building Blocks

Dear National Forest Planners,

I would like to state my support for the recommendations of Mountain True for the Nantahala Pisgah National Forest plan. It is important that we preserve areas that have unique biodiversity and wilderness qualities. I do agree with management through timber thinning and controlled burns, but not through resource extraction through large timber harvesting operations or mining. Controlled burns and selective thinning can be implemented with care in our National Forests to make them healthier. Any logging should not create more roads in our forests. Please do not privatize any Forest lands, because we need all the land we can have for wildlife corridors and for recreation. One of our best resources in NC is our National Forests because of the clean water, wildlife habitat, and opportunities for recreation. Thanks for your consideration of my thoughts.

Sincerely,

Barbara Sloss
