Hello, Thank you for your hard work in a effort to answer our concerns. OK, First choice. ① No Action Alt. ② Second choice Alt 5, The North end Pt Baker Alternative, with modifications. When people, try to protect deer habitat, half assed measures just don't go very far. We did not ask for partial logging North of the 20 Road, we asked for no logging North of 20 Road. Simple. The wolf management section is acceptable, mostly.

Several people here thought the USFS would do the right thing to meet Pt Baker's concerns and long range expectations. I laughed in their faces. No way I said, the USFS could not do the right thing to save their own souls. Their souls were sold when they signed the dotted line.

Its very difficult to watch ^{effects of} global climate change creep over the whole world, meanwhile were chopping down trees as fast as we can. To the USFS, business as usual. Meanwhile ice and glaciers world wide melting faster than computer models predicted. Harsh weather and extreme winds, storms, droughts, will be the share we leave our children. Sounds crazy don't it? Just wait another 20 to 40 years. No one guessed the oil age would end this way and unfortunately we are behind the curve by 30 years or so. But I know, it's all outside the scope of this project objective. No significant impact is expected, with minimal loss of Blah Blah Blah.

You guys tried, but fell short of whats important. I recognize what your up against, but we can't have it all both ways. Its manifest destiny, we have to have it all till it fails. Thanks for trying. JS
