Comments:

All the existing national and state parks need to be protected and put permanently off limits to fossil fuel industry in any form and mining in any form.

They were designated in the first place as a way to keep them safe for all peoples for all time.

Land and indigenous plants and animals on national and state parks once defiled and destroyed can never be brought back to exactly the way they were before such damage is done. The Gulf is still not even close to what it was before the big oil spill and it never will be.

All fossil fuel and mining companies need to be required to spend as much time, money and expertise on recovery and restoration as the spend on discovery and development. Fracking needs to be outlawed. It is destroying the earth's crust in places it was whole. What will be the outcome of continued crust destruction in addition to the side effects of water and air and land pollution?!

Pleas read comments with as much care and consideration as proposals for commercializing and selling off! of
