Comments:

no grazing should be on any site in any nationally owned site. these lousey robber baron cattle grazers need to be kicked off public land owned by 328 million americans. they have no right to get these low prices and damage our national land for their profiteering and then they enrage americans by continually wanting all wildlife on those national lands to be killed and murdered. that is deplorable. that needs to stop. these robber baron cattle ranchers should go out and pay to use land on the private market. their using our national land needs to stop right now. the boy scouts stopped being in the national interest some time ago with their endless fascination with guns and shooting and their social actions are also under scrutiny. keep the conifers. stop all the logging this moneygrubbing logging so that you are in fact killing our national forests is horrific. the management of this agency is about moneygrubbing, not about health for all the people who need those trees making oxygen for us to breathe. the moneygrubbing at the fs is extensive and needs investigation and some put in jail. our forests are there for all, not just hunters coming in with guns and blazing away to murder and kill animals 8 months out of 12. the use of toxic chemicals is abusive and kills americans. we need to get all those dicamba, glyphosate, chlorpyrifos etc out of our forests. this agency extensively uses those crap toxic chemicals to kill life in our forests. and the burning is not helping the forests. the release of that polluted air from the burning in our national forests is killing americans. such release of polluted air clearly causes cancer in the american population. stop the negative environmental effects by the fs. the fs is a lousy govt agency and deserves a grade of f minus. it is not beneficial to all american at this point since it is captured by grazing ranching interests. this comment is for the public record.
