Comments:

Make the Alaska Roadless Rule more restrictive than the 2001 national rule.

We need no new roads in the Tongass but maintain the roads that exist for sake of access

No new mining projects should be permitted on tongass land

Hydroelectric and geothermal development is okay in non-T77/TNC national Priority areas

No new development on the T77 and TNC national priority areas

I want the Forest Service to examine and analyze the value of the old growth timber in terms of Carbon Sequestration on Bananof Island and throughout the Tongass.

I want to see old growth timber put into carbon credit programs where it has more value.

I want active habitat restoration.

I want to see active work towards helping small scale timber operations transition to young growth harvest.

The Tongass is special and sustainable because of the healthy old growth stands and productive salmon habitats that remain. This is what brings tourists (huge economic value) and this is how we protect fish (which is the lifeblood of this region). We need to limit old growth timber harvest. I live here. I recreate here. I am sustained by this land. I love it and I don't want to see it ruined.
