It is my strong belief that this land should not be developed and exploited. Untouched land is a rare find and what little is left on our planet should be protected to the highest degree. As a young adult, the fate of our planet is of the utmost importance to me. I would like to see the conditions of our world improve during my lifetime, so that we can feel proud to along this world to the next generations. I urge those responsible for making the decisions here to leave the land as it is and to continue to protect it instead of destroying it.

This ancient forest is extremely important to the survival of our planet. Climate change is already threatening our survival and cutting down these forests would only exacerbate the problem. There is no time left to make such mistakes. We must make the right choice, right now, for us and for the future of our world.
