Comments:

Balanced and mixed use for all forms of recreational modality should be the vision and plan for the Chugach Forest. Option B is the preferred revision plan that takes into accountability that balance. I have not visited the Chugach forest but I would enjoy to do so some day and have the option in which form of modality I choose. Closing the proposed areas to mechanized recreation and business not only causes a detriment to its local community but removes the opportunity for those who have yet to experience those locations. I someday would like to bring my father who has mobility limitations to experience such a breathtaking landscape and the only way to do so would be through mechanized recreation. With that I'd prefer to have my son to experience it with his Grandfather. By restricting public lands to limited user groups you take the opportunity for my family and other generations to enjoy the diversity of such magnificent lands. Responsible use by all user groups can be obtained and these lands can be enjoyed by all; those who choose to recreate now and those who would desire to have the opportunity to utilize their public lands in the future should not be limited to certain user groups. Please consider diversity of modality and approve Option B for my family's and other families ability to enjoy public lands in a fair, responsible and balanced way that they choose.
