Comments:

King Mountain is an advanced hang gliding and paragliding site (H4/P4) known for strong thermal conditions, moderate turbulence, and occasional high winds that develop quickly.

King Mountain is a World renown and World Class flying site that has special attributes not found anywhere else in the United States. It has unique features and weather patterns that can not be duplicated elsewhere in the U.S. For this reason King MTN should receive special consideration when further plans are drawn affecting its access, use and Airspace surrounding it. Please consider the impact this will have on pilots using this site now and future use of new pilots. I have been flying Hang Gliders for over 35 years and the loss of King Mountain access and use would be a detrimental blow to our community. We are a small group of very well intentioned individuals that make up a unique group that takes care of land and sites that are entrusted to us. Please consider the uniqueness of this site and continue to allow us access and use of the aforementioned land.
