Option D Please! More wilderness.

As a mountain biker, I urge you to treat all mechanical travel as if it has a motor. Because soon they will and you won't even be able to tell. Electric motor technology is turning mountain bikes into dirt bikes. The bottom line for me is each user has right to use their fair share. And when mechanically assisted, they gain access to more than that.

Thank you for allowing me to provide input on the travel plan for the Custer/Gallatin. As a resident of Bozeman for 19 years I have enjoyed skiing, hiking, running, and biking in our forests. I showed up just as the Bracket ck/Grassy Mountain trail was put in. How lucky! Since then, this trail could be used as a proxy for competing uses, and where we are heading. Currently, the trail is used heavily by bikers and dirt bikers. It is draining poorly, loud, and treacherous during peak times.
