Comments:

As a retired federal fishery biologist, who worked for 5 yrs for the USFS in Sitka, and another 35 yrs with feds working with timber sales, studying salmon ecology in WA and CA, including 23 yrs working for NMFS in habitat assessments and regulations of protected fishes in WA, OR, and CA, i have learned a bit about potential effects of forestry on salmonids and their habitats. I support the proposed POW LLA. The area affected on POW Is has already been largely roaded and logged. Since by far most effects of forestry on streams and nearshore are from roads and related infrastructure, it makes sense to manage in roaded areas.
