Can you please tell me what will happen to the existing trail systems within the “evaluation area” if it is decided that it too shall be made into wilderness area? This is not in line with the Forest Management instructions that I have seen... What information are you using to determine that a wilderness area will even benefit anything within the region?

I was born and raised in Idaho – we have one of the greatest balances between man and nature of anywhere in the country. Please don’t skew the balance – we don’t need more uncontrolled wildfires because of forest mismanagement.

I appreciate you taking the time to answer my questions.
