First name: Kat

Last name: Allison

Organization:

Title:

Comments:

The Tongass includes the largest temperate rainforest left in North America. It holds nearly a third of all the old-growth temperate rainforest left on Earth.

This type of ecosystem is rare and irreplaceable. Some of the trees are over 1000 years old.

It's home to a wide range of native animals, who must be protected.

Please protect this national treasure for us and all future generations.
