Comments:

Hello,

I understand the desire to log and create potential economic improvements. However, for the future of all mankind, destroying one of the few large, wild forests left is a huge mistake. We need to use this opportunity instead to teach about the benefits of a protected forest, and look at the long-term effects of opening this to potential clear-cut logging. We cannot afford to throw away a carbon extracting system just for profit. If this bill passes, you are starving and suffocating our future generations.

Alex
