Comments:

Regardless of who you are, what party you choose nor for whom you may have voted, we are all in this together...in this country and in this world. We are all connected to it via the necessity to breathe clean air, drink and use clean water and allow protections, not destructions, for the land that has only us to care for it wisely.

Consideration for the future, how erosion, animal and plant habitat removal and extinction can undo centuries of growth that we intelligently know now are helping us so much via carbon absorption...these are some of the basic reasons to leave the Tongass forests untouched. Commercialization for lumbering, in particular, has shown to be less profitable than the efforts involved. People living within this area also need protection from wasteful efforts to abuse this ancient land.

Our leaders and the R&D in big businesses should be promoting more creative ideas towards living better!
