Title:

Comments:

Our National forests must be protected. They are valuable for numerous reasons, including preservation of wildlife habitat, ecosystems and the vast forests providing oxygen and mitigating the climate crisis. They should not be widely opened to logging or oil/ mineral extraction. Our society needs to move beyond raping our environment for profits, to more sustainable energy and sources of materials. Please listen to scientists and those with knowledge of our environmental treasures, and protect these vast, valuable resources. Protect the Tongass.
