Title:

Comments:

Cutting down an ancient forest is wrong on many levels. We are erasing a history, a network of wildlife and damaging important oxygen producers in an area that needs to be kept as wild & untouched as possible. Destroying it will destroy an entire ecosystem & further speed up the heating up of our planet while also remove organisms that are well known for reducing the amount of carbon & methane in our atmosphere. For those that know, methane is largely responsible for global warming and the continuous degradation of our biodiversity. The planet has already lost much of its trees, many important organisms that aid in sustaining human life as well as humanities resources.

Once cut down, neither our children or even our great grandchildren will be around to see such a forest restored. Yet there are many other younger forests that could be harvested without doing the level of damage as destroying this one would cause.

Find another source and leave our ancient trees to thrive in peace, as well as all of the living things that depend upon their survival. OUR survival could very well depend on them in presently inconceivable ways, as well. Do not destroy our forests.
