Comments:

To whom it may concern;

All available data about our changing climate points to the need for dramatic reduction in atmospheric carbon dioxide as quickly as possible in order to maintain as much life on this planet as we know it over the next 80 years. This is not a long timeframe.

The Tongass Forest is one of the few old growth forests left on the planet, and is a critical part of helping keep our planet from overheating even further than we are already having to prepare for.

I urge you to please keep the Tongass whole, and complete; and to keep logging, mining and other extractive activities that negatively impact the forests ability to operate as an effective carbon-sink, off-limits and banned from taking place in the Tongass.

Thank you.
