Comments:

I wholly object to this newest logging proposal due to the simple fact that there are no locations specified, no designation as to where timber will go, where roads will be created, and can open loopholes to unregulated logging-for-profit in the future by the USFS. If you want to take our forests from us at least have the decency to tell us where it will happen, and what you're doing with our timber.

And yes, it belongs to the public, as our tax dollars pay for your service.
