Comments:

I am concerned about the pesticide applications on over 65,000 acres. The sheer amount of Forest that will be treated with chemicals is extremely disturbing and could cause harm to water supplies and the local ecosystem. I do not support this plan. There is scientific evidence of pesticide and herbicide effects on people and wildlife - cancer, neural damage, et cetera. The government has the charge to keep the public informed on where and how these harmful chemicals will be applied BEFORE they are approved. The government must allow for alternative methods to be proposed and implemented when feasible.
