Comments:

We support your adaptive management and the uses of watersheds as the appropriate project implementation area. We want to see restoration of forest habitat diversity and improving the abundance of fish and wildlife. We support active forest management to include commercial timber harvest. We support fuel management to reduce risk of wildfires. We support aquatic organism passage through replacement of culverts while maintaining the road systems. We support efforts to make small lakes with deep releases not harmful to downstream trout waters.

We support improved recreational opportunities, especially on lakes and streams.

The opportunity to comment is greatly appreciated. We look forward to timely implementation.
