Comments:

Let this correspondence serve as an affirmative voice in favor of all habitat manipulation for the Foothills Project. It is high time that this sensitive region of the foothills national forest experience managed care. I would also be happy to volunteer for assisting in the various experiences as the project moves forward.

Please see this as an opportunity to return this wonderful region of the state to what it once was to increase the hunting and fishing opportunities.

Feel free to contact me for more information or comments as this wonderful project moves forward to improve the habitat in this foothills region of the national forest.
