Comments:

I fully support this project. The replacement of trail #432 with the new trail will improve use of this regional trail network, will decrease current fall line erosion of #432 and will provide an useful connection between the Narrowback Ridge and the Wolf trail parking lot without having to access Tilman Rd.

I support the relocation of under-used legacy trails to create well designed, sustainable trails like this planned trail. I would like to see more trails along the Tilman corridor, particularly trails that have a moderate grade that is accessible to novice and intermediate trail users. The trail network design goal would be to improve the connectivity of the trail system within the North Ranger District and George Washington Forrest to reduce the need to transit roads to get from one trail to another.

The North Ranger District is well known mountain biking destination. Further improvements like this project will result in increased trail use as well a decreased trail maintenance by creating enjoyable, interconnected, and sustainable trails. Access to these type of outdoor resources provide both physical and mental health benefits to our community.
