Stibnite Gold Project EIS #50516

This is a complex and involved project that may have serious impacts on public health issues. Forty five days is not a sufficient amount of time to have a professional analysis of potential shortcomings in the DEIS. It is in Midas Gold's best interest to preemptively solve public health problems from both a safety and financial standpoint. In addition, Covid_19 may delay sufficient professional analysis of the report and restrict public access. For these reasons, I urgently request that the comment period be extended from Oct 13 another 30 days till Nov 12, 2020. Thank you for your consideration of this request.
