I'm writing in support of adding to the mountain bike trail system in the North River District. Connecting new trails with existing trails and building trails from an existing parking lot (Wolf) is a great way to maximize resources and usability. It will also help a wider variety of users to access the trails, not only mountain bikers but also walkers, runners, and hikers. Building a trail that is beginner/intermediate will also help many users. Having the trail system in the George Washington National Forest is a treasure for this area, it offers a respite in nature that has been important especially during this pandemic. Thank you for your efforts in building this network and please continue to support the building of new trails.
