Comments:

I object to the Final Plan not committing to and ensuring there would be an updated soil survey of the entire Custer Gallatin NF. I submitted a substantive comment that updating Forest Soil Inventories are of critical importance for managing virtually ALL of the forest resources. The comment, 50185-2788-6600, was not addressed. The Final Plan does not commit to a modern updated soil survey to facilitate wise management of resources. The Plan does not state any goals or objectives in quantified acreages for a Forest Soil Inventory.
