Comments:

I object to Alternative F for the Hyalite Porcupine Buffalo Horn area. Alternative F would compromise and/or inhibit the desired conditions, goals and objectives for the ecological categories listed in my Comment, 50185-2788-7867. Alternative F provides a selfish imbalance for human multiple recreational and extractive uses that unduly compromises the stated goals and objectives of the Plan.

Furthermore, the Plan does not honestly and fully state ALL of the ecological compromises that justify eliminating protection of the Wilderness Study Area. The Plan fails to assess how, where, and when the increased multiple recreational uses would impact wildlife, soils, aquatic & riparian ecosystems, noxious weed spread. The alternative F decision neither analyzes or provides justification for the the decision to compromise stated goals and objectives
