Comments:

1. Please consider environmental impact of increased electrical power consumption of additional ski lifts, restaurants, and snowmaking including whether the local electric power company will have the necessary additional supply and transmission line capacity. This expansion is an opportunity for GTR to take a leadership role among U.S. ski resorts in incorporating energy conservation/efficiency/use of renewable energy, i.e., solar.
2. Unless there is a perched water table, drilling wells for water supply for the two proposed mountaintop restaurants could be cost prohibitive.
3. Please be extremely sensitive to mountaintop development, i.e., restaurants and incorporate design features that minimize their impact to the iconic Teton mountains viewscape during both daylight and night.
4. I did not read of any plans to expand<sup>5</sup> the number of resort guest parking spaces....these need to increase in concert with the resort's anticipated growth in number of skiers.
5. Please address the potential impact of the proposed expansion on wolverine, pika, and if applicable, Canada lynx species survival.
