Comments:

The EIS must also address:

Will the boundary be closed, i.e., will lift pass-carrying guests be allowed to exit the resort boundary to access the south facing terrain descending to North Teton Canyon? If so, the EIS should consider a) the impact of resultant additional snowmobile traffic, possibly commercial, used to transport skiers back to the resort access road, b) the impact on the quality of experience for dispersed recreational users in Teton Canyon, c) the impact on wildlife in N Teton Canyon, c) the visual and audible impacts on Wilderness users, d) the impact on safety to users in the bottom of Teton Canyon (eg. human triggered avalanches), and e) the anticipated increase in SAR missions to serve sidecountry skiers and snowboarders, and f) the impact of increased traffic on wildlife.
