Please consider the following for analysis in the EIS. I am a current season pass holder at Grand Targhee resort. In addition I have skied and coached skiing at over 20 ski resorts.

1 Skier density with and without expansion into South Bowl and Mill Creek Canyon.

2 Impact on view shed in Teton Canyon from proposed roads, lifts, and cat ski impact.

3 Impact on wildlife in Millcreek and Teton Canyon

4 What would be viable number of user days with Impact on climate change on south facing terrain

5 Impact on PM 2 air pollution in downtown Driggs and Victor due to more traffic.

6Please analyze effect of proposed development on current dark skies in Driggs.

I really enjoy living in a community where I can see the Milky Way.

I believe GTR can add a greater skier experience by improving it's lifts and terrain in the already existing boundaries.
