Comments:

I strongly urge the caribou targhee nf to reject the proposed expansion plan. I say this as a lifelong skier and season pass holder. The current climate situation demands that we begin to reduce the amount of carbon emitted or we will face an unprecedented change in our quality of life. Unfortunately, this type of development directly and radically will alter the amount of carbon consumed by grand targhee. No green washing zero carbon efforts by management will offset the resultant increase in tourists travelling long distances etc if this plan is even partially approved. The caribou targhee nf has an increased obligation to do whatever it can to reduce carbon use as part of the federal government. From a personal and selfish perspective, I also oppose this plan as it would cause the Teton valley to continue it's unsustainable growth trajectory and continue to degrade the rural lifestyle that keeps me here.
