Comments:

Thank you for the opportunity to comment on the usage of e bikes on National Forest land. I am excited by the prospect of e bike access on appropriate trails as I know firsthand what a life changing experience riding bicycles can be. The current advances in technology are making access more widely available to a greater segment of our population and the effects of more Americans on bicycles , electric or human powered, can positively the health of our environment as well as our physical and mental health as humans.
